Re: Reclamation, seeding, and weed control at the area known as "the old rock quarry" at Red Ledges.

To Whom It May Concern:

The area known as "the old rock quarry" near the southwestern edge of Red Ledges property was reclaimed as a native vegetation area during the late fall of 2012 under the direction of Greg Adamson, Project Manager – Red Ledges. The follow steps have currently been completed towards reclamation of the "rock quarry" area.

- The crushed rock material within the quarry area has been removed.
- Topsoil was replaced, graded, and shaped.
- A mixture of native grass and brush seeds was replanted in the reclaimed area.

Going forward Red ledges with implanted an invasive weed management program on the reclaimed site utilizing a combination of chemical and cultural techniques to provide effective weeds management and safeguard the health of the environment and public.

Sincerely,

Patrick Christoffer
Golf Course Superintendent

Sincerely,

Greg Adamson
Project Manager
